Output	28
• Make an appointment	28
• Modify an appointment	29
• Delete an appointment	29
• View an appointment	29
• View all appointments	29

1. Introduction

Picture a system that simplifies the process of managing doctor appointments for an administrator. That's exactly what the Admin Doctor Appointment System using JDBC does.

Now, what makes this system special? It relies on something called JDBC, which acts as a bridge between a computer program and a specific type of database. This helps the system keep track of appointments, doctor details, and all the important data.

Imagine this: whenever the admin needs to set up an appointment for a doctor, there's no need to go through a bunch of manual steps. Instead, they can use this system. They select a suitable time slot, and it's done! On the admin's side, they can easily see the doctor's schedule and ensure everything is well-organised.

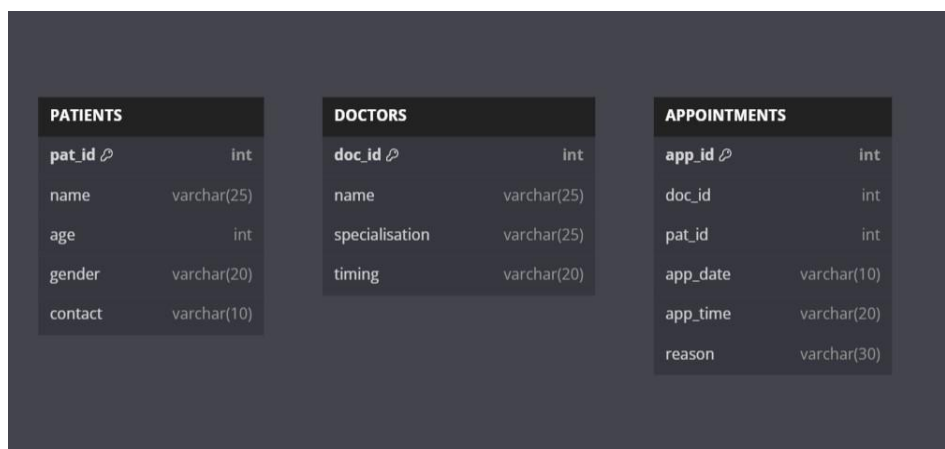

1. Technologies Used

- Java: The programming language used.
- MySQL: Database management system used to store and retrieve information.

2. System Design

- User Interface: The console interface will be used for user interaction.
- Database: The schema includes tables for doctors, patients and appointments.

3. Database Design

2.The Main Menu

Explanation

The main menu is the entry point to the program. There are 4 options in the main menu.

1. Patients Menu

This option will take the user to the patients menu. Patients Menu is explained in detail in Section 4.

2. Doctor Details

This option will take the user to the doctor details. All doctor details can be obtained from here. It is explained in Section 3.

3. Appointments Menu

This option will take the user to the appointments menu. Appointments menu is explained in detail in Section 5.

4. Exit

This option will help the user to exit the program.

Code

The code for the main menu in java is given below,

```
package Appointment;

import java.util.Scanner;

public class Main {
    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);
        int choice;

        do {
            displayMenu();
```

```

        choice = scanner.nextInt();
        scanner.nextLine();

        switch (choice) {
            case 1:
                Patients.Patient_Menu();

                break;
            case 2:
                try {
                    Doctors.PrintDetails();
                } catch (Exception e) {
                    System.out.println(e);
                }

                break;
            case 3:
                Appointments.Appointment_Menu();

                break;
            case 0:
                System.out.println("\n Exiting the
program.");
                break;
            default:
                System.out.println("Invalid choice.
Please select a valid option.");
                break;
        }
    } while (choice != 0);

    scanner.close();
}

private static void displayMenu() {
    System.out.println("-----THE DOCTOR
APPOINTMENT SYSTEM-----");
    System.out.println("\n Welcome to the Doctor
Appointment System\n");
    System.out.println("\n1 - Patients Menu \n");
    System.out.println("2 - Doctor Details \n");
    System.out.println("3 - Appointments Menu \n");
    System.out.println("0 - Exit\n");
    System.out.println("Please enter an option below:");

}
}

```

Output

The output of the main menu is given below.

```
-----THE DOCTOR APPOINTMENT SYSTEM-----  
  
Welcome to the Doctor Appointment System  
  
1 - Patients Menu  
2 - Doctor Details  
3 - Appointments Menu  
0 - Exit  
  
Please enter an option below:
```

3.The Doctors List

Explanation

When choosing Option 2 from the main menu, the user can view the doctor details. Doctor details include name, specialisation, and timing.

Code

The code for doctor details is given below

```
package Appointment;  
  
import java.sql.Connection;  
import java.sql.DriverManager;  
import java.sql.ResultSet;  
import java.sql.Statement;
```

```

public class Doctors {
    public static void PrintDetails() throws Exception {
        Class.forName("com.mysql.cj.jdbc.Driver");
        Connection con =
DriverManager.getConnection("jdbc:mysql://localhost:3306/Doctor_Ap
pointment", "root",
                                "The#1password");
        Statement st = con.createStatement();
        ResultSet rs = st.executeQuery("select * from
Doctors");
        System.out.println("-----DOCTOR DETAILS-----");
        System.out.println("ID Specialisation Name
Timing\n-----\n");

        while (rs.next()) {
            System.out.println(rs.getInt("doc_id")
                                + " " +
                                rs.getString("specialisation") + " "
+ rs.getString("name") + " " + rs.getString("timing"));

        }
        System.out.println("\n\n");
        st.close();
        con.close();

    }
}

```

Output

The output of the Doctor List is given below.

Please enter an option below:

2

-----DOCTOR DETAILS-----

ID Specialisation Name Timing

101 Pediatrics Thomas 09:00-17:00

102 Psychiatrist Shaun 09:00-12:00

103 Radiologist David 14:00-17:00

104 Neurologist Marcus 10:00-13:00

105 Dermatologist Steve 09:00-15:00

4. The Patients Menu

Explanation

By entering option 1 in the main menu, the user gets to the patient menu.

Here, there are 6 options.

- **Register a patient**
The admin can register a patient by entering name, age, gender and contact number.
- **Modify Patient Details**
A menu will appear where the user can choose to modify name, age, gender or contact number.
- **Delete a patient**
The admin can choose to delete a patient record by providing the patient ID.
- **View a patient**
The admin can view patient details by providing the patient id.
- **View all patients**
The admin can view details of all patients using this option.
- **Exit to main menu**

Code

The code for the patient menu is given below.

```
package Appointment;  
import java.sql.Connection;  
import java.sql.DriverManager;  
import java.sql.ResultSet;  
import java.sql.Statement;  
import java.util.Scanner;
```

```

public class Patients {

    public static void Patient_Menu() {
        Scanner scanner = new Scanner(System.in);
        int choice;

        do {
            displayMenu();
            choice = scanner.nextInt();
            scanner.nextLine(); // Consume the newline
character

            switch (choice) {
                case 1:
                    try {
                        Insert_Patient();
                    } catch (Exception e1) {
                        System.out.println(e1);
                    }

                    break;
                case 2:
                    try {
                        Modify_Patient();
                    } catch (Exception e1) {
                        System.out.println(e1);
                    }

                    break;
                case 3:
                    try {
                        Delete_Patient();
                    } catch (Exception e1) {
                        System.out.println(e1);
                    }

                    break;
                case 4:
                    try {
                        PrintDetails();

                    } catch (Exception e) {
                        System.out.println(e);

}

```

Output

The outputs for each of the options are given below.

- Register Patient

```
-----  
1  
  
-----INSERT PATIENT-----  
  
Enter Patient Name  
Mary  
Enter Patient Age  
5  
Enter Patient Gender  
Female  
Enter Patient Contact Number  
8912451278  
  
Patient inserted successfully  
  
-----
```

- Modify Patient Details

```
-----  
2  
  
-----MODIFY PATIENT DETAILS-----  
  
1. Change Name  
2. Change Age  
3. Change Gender  
4. Change Contact Number  
0. Exit  
  
Enter your choice:  
2  
Enter Patient Id:  
202  
Enter Patient's Age:-  
17  
Patient updated successfully
```

- Delete Patient

```
-----DELETE PATIENT-----  
  
Enter Patient ID  
209  
Enter Patient ID again  
209  
  
Patient deleted successfully  
  
-----
```

- View a patient

```

4
Enter Your Patient ID
208
-----PATIENT DETAILS-----
ID  Name  Age Gender Contact
208 Mary  5  Female 8912451278

```

- View all patients

```

-----
5
-----PATIENT DETAILS-----

ID  Name  Age Gender Contact
202 Alex  17  Male 9897878898
203 Anna 22  Female 1457856255
208 Mary  5  Female 8912451278
-----

```

5. The Appointments Menu

Explanation

By entering option 3 in the main menu, the user gets to the appointments menu.

Here, there are 6 options.

- Make an Appointment

The admin can make an appointment by entering doctor ID, Patient ID, date, time and reason.

- Modify Appointment Details

A menu will appear where the user can choose to modify doctor ID, Patient ID, date, time and reason.

- **Delete an appointment**
The admin can choose to delete a appointment record by providing the appointment ID.
- **View an appointment**
The admin can view appointment details by providing the appointment id.
- **View all appointments**
The admin can view details of all appointments using this option.
- **Exit to main menu**

Code

The code for the patient menu is given below.

```
package Appointment;

import java.sql.Connection;
import java.sql.DriverManager;
import java.sql.ResultSet;
import java.sql.Statement;
import java.util.Scanner;

public class Appointments {
    public static void Appointment_Menu() {
        Scanner scanner = new Scanner(System.in);
        int choice;

}

```

Output

The outputs for each of the options are given below.

- Make an appointment

```

-----INSERT APPOINTMENT-----
Enter the Doctor ID
102
Enter your Patient ID
202
Enter the Date(DD/MM/YYYY)
17/08/2023
Enter the Time in 24 hour format(15.00)
10:00
Enter the Reason
Depression

```

- Modify an appointment

```

2
-----MODIFY APPOINTMENT DETAILS-----
1. Update the Doctor
2. Update the Patient
3. Update Date
4. Update Time
5. Update the reason
0. Exit

Enter your choice:
3
Enter Appointment Id:
304
Enter the new date
18/08/2023

Appointment updated succesfully

```

- Delete an appointment

```

3
-----DELETE APPOINTMENT-----
Enter Appointment ID
307
Enter appointment ID again
307

Appointment deleted successfully
-----

```

- View an appointment

```

0. Exit
4
Enter Your Appointment ID
304
-----APPOINTMENT DETAILS-----
App_ID | Doc_ID | Pat_ID | Date | Time | Reason
304 101 208 18/08/2023 14:00 Headache
-----

```

- View all appointments

5

-----APPOINTMENT DETAILS-----
